

TransFollow's 'Show and Sign Component'
is a new step in paperless transport!

TransFollow was commissioned by the Neutral Logistic Information Platform (NLIP) to develop an interface that enables all drivers to use the TransFollow digital waybill and associated digital signature simply and easily.

What have we developed?

A new technology and instructions for its application. This technology enables mobile on-board computers and (Android) apps to easily access a secure environment in which users can place a signature to acknowledge receipt. It is similar to the secure environments you are directed to when paying for purchases from a webshop via iDEAL. What iDEAL is to payments, the Show and Sign Component (TSSC) is to waybill data.

What is there still to do?

All that remains is for suppliers of mobile on-board computers and apps to integrate this technology into their products. In this way, all their customers can use this excellent feature via the TransFollow community platform and transport their products in a completely paperless manner.

Where can I get this technology if I want to use it?

TransFollow has made the technology, technical specifications and development instructions available on its own website and on the NLIP's website. TransFollow serves as a helpdesk, managing, maintaining and improving the technology based on user experiences.
